

KANGNAM KIM

Applied AI / ML Engineer

Seoul, South Korea | kangnam7653@gmail.com | linkedin.com/in/kangnam7654 | github.com/kangnam7654 | kangnam7654.github.io

Open to Korea-based remote or hybrid roles and employer-sponsored relocation.

SUMMARY

Applied AI / ML Engineer with approximately five years of experience building LLM, speech, and vision systems from data and model development through inference optimization and operations. Focused on reliable, cost-aware workflows that solve real user problems.

SELECTED EXPERIENCE

AI Research Engineer | Rye&Catchers

May 2026 - Present | Seoul, South Korea

- Develop anomaly-detection systems for malicious behavior and files, currently in training and validation: LSTM likelihood scoring for CERT user behavior and VAE reconstruction error plus uncertainty quantification for BODMAS PE files.
- Build an agent that turns customer interviews into reusable personas for persona-driven analysis.

AI Engineer, MIR5 Program Office / Server Team | Wemade Next

Feb 2026 - May 2026 | Seoul, South Korea

- Built an MCP server for natural-language CRUD operations on Unreal Engine objects with asynchronous processing, many-to-many connectivity, and dynamic tool registration.

AI Engineer | Creverse (Chungdahm Learning), Nesto CV / AI Business Team

Apr 2024 - Jun 2025 | Seoul, South Korea

- Designed, deployed, and operated an Azure ML Endpoint and Blob Storage inference pipeline for automated presentation assessment used by approximately 30,000 students monthly.
- Fine-tuned NVIDIA Parakeet for non-native children's speech, reducing WER from 9.6% to 4.4%; implemented MediaPipe-based gaze and posture assessment with 98.77% validation F1 while keeping inference practical for CPU operation.
- Built LangGraph student-and-evaluator agents to explore synthetic data for a potential international assessment context; implemented safety controls for a children's generative-image service.

AI Research Engineer | Metaverse World (Netmarble F&C)

Oct 2022 - Jan 2024 | Seoul, South Korea

- Prepared data and implemented and trained GAN-based Face-to-Character PoC models; evaluated outputs qualitatively and compared GAN, VAE, and autoencoder approaches. Game-engine integration was not completed.

ADDITIONAL EXPERIENCE

AI Research Engineer, Coconut Silo (Jun 2021 - Apr 2022) - Developed a BERT-embedding recommender, fine-tuned YOLOv5 for maritime radar imagery, and designed vision-based anomaly detection for metal 3D-printing monitoring.

Data Scientist, Gaion Co., Ltd. (Aug 2020 - May 2021) - Collected and analyzed data for Data Voucher projects and planned an SME matching platform using trade data.

TECHNICAL FOCUS

Python, C++ | PyTorch, scikit-learn, LangGraph | LLM agents, MCP, hybrid retrieval, speech recognition, computer vision, anomaly detection | FastAPI, Azure ML, Blob Storage, Docker, Linux, ONNX, TensorRT, Triton | OpenCV, MediaPipe, Pandas, Polars, NumPy, FFmpeg

EDUCATION

Sogang University Graduate School of AI & Software - Master's degree in Data Science & Artificial Intelligence (Mar 2023 - Feb 2026) |

Sejong University - B.S. in Physics

Certifications: AICE (AI Certificate for Everyone), Basic | ADsP (Advanced Data Analytics Semi-Professional)
